

Lake Management News Update for 2020 ...

*As part of our management strategies we actively gather data around the herbicide treatment area to better understand the timeframe in which the herbicide is present in the lake. Thus we collect water samples to detect the concentration in areas adjacent to our treatment zone. The **attached URL links** below will provide you with some context for the sampling we will be conducting in 2020 on North Twin Lake for the post treatment with those results compared to our sampling in the [**ProcellaCOR treated area last year**](#). This data is invaluable not only for our Lake District but for the WDNR and other Lake Associations and Districts as we continue to learn about our water resources and how they respond to management activities in our efforts to control invasive species.*

Jay Wittman – Lake District Lake Management Coordinator ...
