

## South Twin Milfoil Treatment Notice

The Lake District previously announced plans to treat three "spots" of South Twin with ProcellaCOR to seek better control of the aquatic invasive species (AIS) Eurasian Water Milfoil (EWM).

This email is to notify Lake District Riparians that the treatment will be completed on **Wednesday June 9, 2021**. Treatment will begin early Wednesday morning and likely completed by Noon. The "spots" of the lake being treated are identified in the map related to this email.

Shoreline notices were posted on Tuesday as required by our WDNR permit. Thanks to the volunteers who helped with posting the shoreline notices.

Crews of volunteers will be taking water samples in the treated "spots" to monitor the ProcellaCOR concentration levels. This helps us, Onterra and the WDNR with the evaluation of treatment effectiveness.

As we inspected the target treatment areas today, we did notice a significant EWM colony in the northwest section of South Twin. The level of EWM dominance in this area in 2021 is considerably greater than it was in 2020 when our treatment plans were developed. The Lake District Commissioners plan to discuss treatment possibilities for this area of South Twin in the near future. We'll keep you posted.

Thanks for your engagement and support.

For the Lake District Commissioners,

Joe Fritzsche, Chairperson.
